

September 2011

OFFER FROM THE SCHOOL NURSE SCHOOL YEAR 2011-2012

K2:

All preschool children are offered a health talk, motor examination and measurement of height, weight, eyesight and hearing by the school nurse. If there appears to be a need for an interview with a doctor, this will be offered by the local doctor.

Grade 1:

Each student will have a measure and weigh test – and if needed - the student will also have a vision and hearing test (all tests are optional).

Grade 4:

The school nurse offers health talks, height and weight test.

Grade 7:

The school nurse offers health talks and a vision test.

Grade 9:

The school nurse offers a health talk and measurement of height, weight, vision, hearing test (color test if needed), and a discussion of career choices in relation to student health.

Extra talks and tests during the school years.

Besides the above services the nurse will also offer to talk with the children, where there is a need - this can be children who the nurse has made an agreement with at the last health talk, with children where teachers have a concern (this is of course in cooperation with parents) where parents have a concern or the child is having a problem/need.

If there appears to be a need for an examination or an interview with a doctor, it will always be possible to get an appointment with the local doctor. This can be arranged through the nurse.

Electronic records.

The nurse is, by law obliged to keep records related to the interviews and surveys conducted. At Fredensborg Kommune information is recorded electronically. The nurse and local doctor both record information about the performed tests and details about the child, health, wellbeing and any health issues. It is always possible for parents to get access to their child's medical record. Parents can demand that incorrect information be corrected.
